

## GAMPACK GROUP, top partner in packaging & end-of-line solutions

Innovation, Flexibility, Turnkey Solutions and Greening. These are the cornerstones of this Italian group, which is the result of the strategic partnership between Futurapack and Gampack, to deliver a unique, comprehensive service for the food & beverage, pharma-cosmetic and personal care industries.

GAMPACK Group, Italian leader in secondary packaging and end-of-line solutions, is the result of the strategic partnership between Gampack and FuturaPack, well-established manufacturers situated in the heart of the Emilia Packaging Valley, one of the busiest industrial districts in Northern Italy. This winning combination enables mutual business experience and extraordinary technological expertise to be drawn together, to provide final customers in various market sectors with a comprehensive, wide-ranging service, from tailor-made idea development, to a finished turnkey solution.

GAMPACK was established in 2004 in Podenzano (Piacenza, Italy) and is active in the international secondary packaging industry. Gampack designs in-house automatic packaging machines and systems according to the many different type of product to be packaged, with standard or customized versions available to meet any automation requirement. The aim is to deliver optimal secondary packaging machines to meet the most diverse market requirements, providing the customers with solutions that are extremely functional and easy to manage and maintain, not altering product characteristics and safeguarding the environment as suggested by sustainable development principles. Gampack machines, such as tray packaging machines, wrap-around case packers, combined film and tray or flat pad packing machines, conveyor systems, dedicated pick & place machines, clustering and palletizing systems, shrink wrapper machines and tailor-made applications have been successfully installed in packaging plants of major national and international manufacturers and packaging companies in the beverage, food, pharmaceutical, cosmetic and home care industries. Extensive innovation, experience and investment in research and development ensure that GAMPACK machines are highly reliable and well-tested. Increased interest on robotic solutions and a strong desire to complete machine's range led

Gampack to choose FUTURAPACK as its ideal partner.

The Company, based in Alseno (Piacenza), a few miles away, has been designing and

manufacturing robotized end-of-line solutions for over 20 years, using the latest automated technology, in many different sectors: food (including baby and pet food), coffee (capsules) and pharma-cosmetics industries and many more. A keyword at the company is 'flexibility', which in combination of "creativity" is the way the staff approaches complex issues, in an open challenge with the potential of technological resources. Supported by an in-house engineering department and an R&D that enables the delivery of cutting-edge solutions, FuturaPack has been committed to embrace the digital transformation, to use the acquired experience to serve industry supplying sophisticated systems, from packaging to pallet solutions. The brand is appreciated in Italy and abroad for its unique and innovative applications. The union with Gampack has allowed FuturaPack to reorganise its corporate structure and implement the customer after-sales service with the aim to create a longstanding relationship with their Customers. The GAMPACK Group is the ideal technological partner in the design and development of highly innovative packaging solutions, on both the Italian and the international market.

The Group's strengths is to be a one-stop shop specialist in automation for different market sectors such as the food & beverage, cosmetics, pharmaceutical industries and many more.

The Group's philosophy looks to the future with an ethical conscience, therefore the GAMPACK Group welcomes greening challenges, and operates to safeguard the environment by adopting the principles set out by the European energy transition agenda. The next steps will see the Group focusing on a path to achieve an international reputation as a highly-specialist organisation in the production of end-of-line solutions within secondary and tertiary packaging operations, offering a wide range of automated systems, including robotic handling, box and case packing, and palletising machines.
